Skier Triggered Avalanche, Mount Blackmore

Mt Blackmore
Northern Gallatin
3/21/2021
Code
SS-AS-I
Elevation
10000
Aspect
SE
Latitude
45.44440
Longitude
-111.00400
Notes

From email: "On our way out (from Alex Lowe Peak) we watched two skiers climbing to the top of a gully on the SE face of Blackmore... When I looked up again 5 minutes later, the gully had slid. Luckily, based on their tracks it looks like they triggered it from the top without getting caught and then skied it. The first skier was already at the bottom and the second was on his way down."

Number of slides
1
Number caught
0
Number buried
0
Avalanche Type
Soft slab avalanche
Trigger
Skier
Bed Surface
I - Interface between new and old snow
Problem Type
New Snow
