Wind slabs mid-slope at Bridger Bowl

Bridger Bowl
Bridger Range
11/18/2022
Code
AS-R1-D1
Latitude
45.81500
Longitude
-110.92300
Notes

From obs: "triggered a small wind slab in sluice box today. this was not a surprise as all of the wind loaded areas had shown cracking and instability on the way up. though these other areas exhibited the same instability, this little pocket in sluice was the only spot steep enough to run."

submitted to us via IG: "triggered this large wind slab below Bridger Lift this morning [11/18]. It propagated quite a ways."
