skier triggered slide near Daisy

Date
Thu, 03/02/2023 - 03:55

From email 3/3/23: "Another natural avalanche that ran across the road near Daisy pass last night. Our groomer took this picture. I was also informed that some skiers triggered an avalanche near Daisy yesterday afternoon. No other details on that. This would be a w/SW facing slope."

After further investigation: "It is the same avalanche that the skiers triggered. Crown looks 5-6' deep, 150'+ wide and SW aspect."

Region
Cooke City
Location (from list)
Daisy Pass
