

Many natural long running new snow slides

Bridger Bowl
Bridger Range
4/17/2020
Code
SS-NC-R1-D1.5-I
Elevation
8400
Aspect Range
E-S
Latitude
45.81560
Longitude
-110.92300
Notes

GNFAC forecaster observed many wet loose slides entraining recent snow from Bridger Peak through the Throne. There were also fresh drifts along the ridgeline that broke naturally and became long running wet loose slides. [Slide](#) sizes ranged D1-D2.

From obs email (4/17/20): "5(?) slides into North Bowl (the two large ones already on your site plus 3 smaller ones - 2 of which happened sometime during the morning (they were not there when I left the car at 745). Also new [slide](#) in Bridger Gully. Plumes of snow blowing off the ridge / Saddle Peak"

Number of slides
1
Number caught
0
Number buried
