Avalanche debris and crowns On blackmore

Date Sat, 01/28/2023 - 15:05 Activity Skiing

There were numerous debris piles, point releases, and crowns on the north face of Elephant and the northeast face of Blackmore this morning. Most of them appeared to have run during the storm (1/27) and had been covered by at least 6 inches of new snow.

Region Northern Gallatin Location (from list) Mt Blackmore Observer Name Shawn Regnerus
