Natural wet loose near Cooke and Livingston

COOKE CITY Cooke City 3/7/2020 Code WL-N-R1-D1.5-G Elevation 7500 Latitude 45.02020 Longitude -109.93800 Notes

From email: "[Near Mill Creek] We saw a natural wet <u>slab</u> that had released recently on a nw slope at around 7000' (WS-N-R1-D1.5-G). Also got a big <u>collapse</u> on a sw <u>aspect</u> at about 7500' on a moist layer of 4mm <u>depth</u> <u>hoar</u>. HS was only about 50cm where I got the <u>collapse</u>. Overall the snow was some wet hot garbage on all aspects,..."

Separate email: "Photo attached of some wet loose avy activity observed today just west of Cooke City (south <u>aspect</u>, around 8200'). Overall though, minimal wet avalanche activity observed with this significant warm up. No additional <u>slab</u> avalanche activity observed this week,..."
