Remotely triggered an avalanche, Mt. Jefferson

Mt Jefferson Bowl Island Park 2/7/2023 Code SS-AFc-R2-D1-O Elevation 9000 Aspect E Latitude 44.56580 Longitude -111.50000 Notes

We rode up Yale Creek and into Mt Jefferson Bowl. Walking to the edge we triggered an avalanche (intentional) on a slope that was getting wind-loaded. It broke up to 1.5 feet deep, 250 feet wide and 50 feet vertical. The new wind drifts were sensitive to triggering and the slabs propagated wide. Weak layers at the old snow surface may have helped us remotely trigger the slope. The two things to look out for in the Centennials are weak layer of sugary snow or feathery surface hoar in the upper 3 feet of the snowpack and slopes that are freshly wind-loaded.

Number of slides 1 Number caught 0 Number buried 0 Avalanche Type Soft slab avalanche Trigger Foot penetration **Trigger Modifier** c-A controlled or intentional release by the indicated trigger R size 2 D size 1 Bed Surface O - Old snow Problem Type Wind-Drifted Snow Slab Thickness 18.0 inches Vertical Fall 50ft Slab Width 250.00ft

Slab Layer Grain Type Wind Broken precipitation particles Slab Layer Hardness 1F-Images Cracks shot out from my feet and triggered the avalanche on steeper slopes. The avalanche was remotely triggered as we walked to the edge. Attached Videos We Triggered an Avalanche - Island Park - 7 February 2023 Snow Observation Source Remotely triggered an avalanche, Mt.
